

2017 IPGA Spray Program and other bulk product orders

I have designed a spray program for anyone who would like to use it. The cost is \$90 per 1 thousand square feet for an entire season.

This spray program includes 2 different insecticides, 2 biological fungicides, 2 soil drench fungicides and several other foliar fungicides. This program will give you pretty much all the protection you need to grow a monster pumpkin.

I need a count of who wants this spray program and how many thousand square foot sets you want by February 12, 2017. I need it by this date so I can order the chemicals.

I will not be able to make the trip to Wisconsin as I had planned so if you want any Greengro products I can get you into contact with them and have it shipped to your door.

The last product I would like to split with people is the product Ureamate (5-10-27). This is the same product that Cecil Weston uses. Mark Goodman and I both used it in 2016 also and we plan to use it in 2017. It takes about a pound per plant per season. We can only get it in 25 pound bags. The cost is less than \$5 a pound.

Please get back with me asap for these products so I can get orders in order.
